G8.8 Bolt Torque (Non-Lubricated)					
DIAMETER (mm)	5mm	6mm	8mm	10mm	12mm
NEWTON-METRES (Nm)	6 Nm	10 Nm	15 Nm	22 Nm	35 Nm

Let's get to work.

Preparation

1. It's best if we get the mounting pins attached to the Mounting Board first. If you ordered a set of pins, these will have been included. If you already had some, that's great! If you've lost them, we know a place you can buy some...
2. The genuine Maxtrax Mounting Pin Set contains 4 x pins, 4 x nyloc nuts and 4 x washers. We find it easiest to attach the pins to the mount by holding the pin in place with a spanner, while using a socket to tighten the nut. Ensure the pins are mounted to the folding bracket correctly, as pictured.
3. Ensure the final position of the pin matches the same orientation as the keyholes of your Maxtrax. This can vary, depending on your desired bracket placement.

Installation

4. Workout the desired placement of the Mounting Board in relation to your cross bars. Ensure that mounting channels in the rack are in alignment with the slots in the the board, as pictured.

   Please note: the distance between cross bars can be a maximum of 960mm. If your cross bars are further apart, they will need to be adjusted.

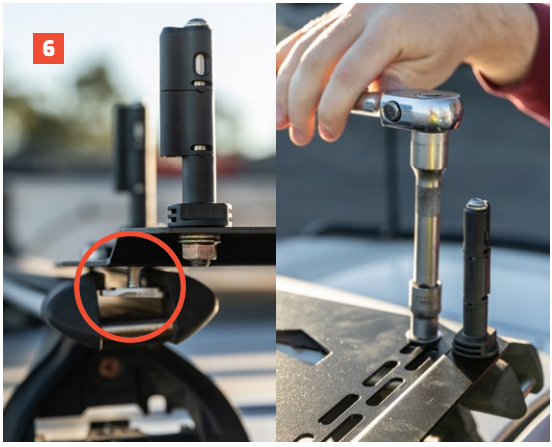

5. In the Mounting Board slots determined in the previous step, place a tee bolt from underneath, securing loosely from the top with a washer and nyloc nut.

6. Thread the tee bolts into the cross bar channels and twist to seat the nuts across the channel opening. Tighten to secure.

7. That's it, you're done!
   Now you can save space in your vehicle and easily mount your recovery boards in a convenient spot on your roof rack.

Local Knowledge & Assistance

We know half the fun of building your dream 4x4 is getting your hands dirty. But we also know that sometimes, things don't go to plan. If in the pursuit to build the ultimate setup you find yourself off-track, we're here to help you get unstuck.
