Let's get to work.

Preparation

1. First step in preparing your panel is to decide on and source the switches and 12V accessories you want for your setup. It's easier to install these within the panel before fitting it in the vehicle.

   The inner two holes suit rocker switches or dimensionally similar accessories, and the outer two are standard 12V accessory sockets. There are also two locations for Anderson plugs, with holes allowing for mounting in both front-facing and outwards-facing orientations.

2. Install your chosen components to the panel in the configuration of your choice.

3. It's easier at this stage to secure any wiring to the cable management slots in the rear of the panel.

Installation

4. Identify the desired location for your panel, ensuring you have at least 70mm clearance to anything situated behind the desired mounting position.

   If you're fitting it to a Side Molle Panel, you may need to uninstall some of the Molle mounting bolts in order to slip it in behind.

5. Secure using the provided M5 screws.

6. With the panel installed, it's over to you for wiring to suit your setup.

   We provide a series of cable management plugs and cable ties that push-fit into the M6 holes of our molle mesh. These can be used to neatly route wires to accessories or power.

Local Knowledge & Assistance

We know half the fun of building your dream 4x4 is getting your hands dirty. But we also know that sometimes, things don't go to plan. If in the pursuit to build the ultimate setup you find yourself off-track, we're here to help you get unstuck.
